

OmniChek™-SAA

Multispecies rapid test for Serum Amyloid A

1 Detect inflammation & infection

2 Confirm & Monitor Disease

3 Routine Screen & Wellness Check

SAA is a biomarker of inflammation. Within hours of injury or infection SAA levels rise rapidly and remain high until treatment or resolution, making it possible to detect infection at the earliest opportunity and confirm or monitor illness.

To detect, monitor or screen inflammation OmniChek™-SAA is a valuable addition to your workflow.

A simple to perform and simple to interpret test for infection and inflammation, complementing your existing diagnostic workflow and providing almost instant information for decision making.

It's as simple as 3-2-1!
